

TROVE

Food & Cake Shop
Inventory & Product Monitoring System

USER MANUAL

Owner Edition

Prepared for the business owner • Davao City

Welcome to Trove

Trove is a simple system for keeping track of your products and raw materials across your two locations — the **Matina commissary** (where everything is made and stored) and the **Jacinto branch** (where goods are sent to be sold).

Trove does **not** handle payments or act as a cash register. It is a **monitoring** tool: it tells you what you have, what you sent out, what came back, what you spent, and how your batches performed — and it works fully offline.

What you can do with Trove

- See your whole business at a glance on the **Dashboard**.
- Record **custom cake & food orders** (Commissions).
- Keep a **product catalog**, each with its own recipe.
- Track **raw-material inventory** with low-stock warnings.
- **Dispatch goods to Jacinto** and reconcile what was returned (Branch Transfers).
- Record **expenses** and print a **weekly batch report**.
- Create and manage **user accounts** for your managers and staff.

A NOTE ON ROLES

Trove has three roles. The **Owner** is the master account — it can do everything, including creating accounts and permanently deleting archived records. **Managers** can do most tasks including managing accounts. **Staff** handle day-to-day recording but cannot manage accounts.

MODULE 1

Logging In

Trove is private. Every person needs their own account to get in. Accounts are created for you from inside the system — there is no public sign-up page.

1. Open Trove in your web browser.
2. On the login screen, type your **email address** and **password**.
3. Click **Log In**. You will land on the Dashboard.

GOOD TO KNOW

Only an **Owner** or **Manager** can create new accounts (see Module 9). If someone leaves, you don't delete them — you **deactivate** their account so their past records stay intact.

MODULE 2

The Dashboard

The Dashboard is your home screen — a one-look summary of how the business is doing right now. It works entirely from the records you enter.

The Dashboard

The four summary cards

- **Batch Sent (this week)** — how many pieces you dispatched to Jacinto.
- **Net Sold (this week)** — what was sold (sent minus returned), in pesos.
- **Low Ingredients** — how many raw materials need restocking at Matina.
- **Finished Stock** — total finished products on hand across your products.

Each card has a **View** → link that jumps straight to the matching page, so the Dashboard doubles as a set of shortcuts.

The panels below

- **Latest Batch — Reconciliation:** your most recent dispatch broken down into Dispatched, Net Sold, and Returned (loss), with a per-flavor table.
- **Ingredient Stock Levels** (lowest first): a quick bar view of what's running low.
- **Recent Stock Movements:** the latest ingredient activity (e.g. materials used).
- **Can Still Bake:** based on your recipes and current ingredients, how many of each product you can still make — so you know your limits before you start.

TIP

The **Can Still Bake** panel is your early-warning for production. If a popular flavor shows a low number, check the ingredient it's short on and restock before you run out.

MODULE 3

Commissions (Custom Orders)

A **commission** is a custom order — a birthday cake, a bulk order for an institution, and so on. The list is split into tabs: **All**, **Individual** (personal custom orders), and **Institutional** (schools or companies, e.g. UM, Stella Maris), each showing a count.

The Commissions page

Recording a new commission

1. Click **+ New Commission** (or **Create First Commission** if the list is empty).
2. Choose the **client type**: Individual or Institutional.
3. Fill in the **customer name** and a **design description** of what they want.
4. Set the **needed-by date** so you know your deadline.
5. Enter the **total amount** and any **deposit** already paid.
6. Save. The order appears in the list and can be updated as the work progresses.

TIP

Use the **Individual / Institutional** tabs to filter the list — handy when an institution follows up on their bulk order.

MODULE 4

Products

Products are the items you make — your cakes and pastries. The Products page shows them as cards with a photo, price, category, and a stock badge. Use the **search bar** or the **category chips** (All, Cake, ...) to find one, and the **menu icon** on each card to edit or archive it.

The Products catalog

Adding a product with a recipe

1. Click **+ New Product**.
2. Fill in **Product Name**, an optional **Description**, the **Category**, and the **Price**.
3. Set the **Starting Finished Stock** (how many you already have made), and optionally upload a **Product Photo** (JPG or PNG, up to 2MB).
4. Under **Recipe (Raw Materials Needed)**, click **+ Add Ingredient** and set how much of each inventory item is needed to make **one unit** of the product.
5. Click **Save Product**.

Cancel Save Product

The Add Product form with recipe

WHY THE RECIPE MATTERS

The recipe is what powers the **automatic stock deduction** and the **Can Still Bake** panel on the Dashboard. Once Trove knows a cake needs 2kg flour and 3 eggs, it can work out how many you can make and subtract materials as you produce.

MODULE 5

Inventory

Inventory is your stock of **raw materials** at the Matina store — flour, sugar, boxes, and so on. Three summary cards sit at the top: **Total Items**, **Low / Critical Stock**, and **With Damaged Units**. The last two are **clickable filters** — click one to see only those items.

ITEM	CATEGORY	STOCK	MIN STOCK
All-Purpose Flour	Baking Essentials	50.00 kg OK	10.00 kg
White Sugar	Baking Essentials	40.00 kg OK	10.00 kg
Eggs	Dairy & Eggs	30.00 dozen OK	5.00 dozen
Butter	Dairy & Eggs	25.00 kg OK	5.00 kg
Cocoa Powder	Flavoring & Fillings	15.00 kg OK	3.00 kg
Ube Halaya	Flavoring & Fillings	12.00 kg OK	3.00 kg
Cream Cheese	Dairy & Eggs	18.00 kg OK	4.00 kg
Ripe Bananas	Flavoring & Fillings	20.00 kg OK	5.00 kg
Whipping Cream	Dairy & Eggs	15.00 liters OK	3.00 liters

The Inventory page

Reading the stock badges

Each item shows a colored badge based on how much is left against its minimum stock, so you can scan the page and spot problems instantly:

Badge	Meaning
OK	Healthy stock — nothing to worry about.
Low	Getting low — plan to buy more soon.
Critical	Almost out — buy now.
Out	Zero on hand — cannot produce items that need it.

Adding and finding items

1. Click **+ Add Item**, then fill in **Item Name**, **Category**, **Unit**, **Starting Quantity**, and the **Minimum Stock** (the level that triggers a low-stock alert). Add **Notes** if needed, then **Save Item**.
2. Use the **search bar** to find an item by name.
3. Click the **Low / Critical** or **With Damaged Units** card to filter the list.

MODULE 6

Branch Transfers

This is how goods move from the **Matina commissary** to the **Jacinto branch**, week by week. Because Trove has no cash register, Branch Transfers are also how you measure sales: whatever you send and **don't get back** is counted as sold.

THE KEY IDEA

Net Sold = Sent – Returned. You dispatch a batch to Jacinto, and at the end of the week you record what came back unsold. The difference is what was sold — and the batch's revenue is worked out from that.

The screenshot shows the 'Branch Transfers' page in the Trove application. The left sidebar contains navigation links for Dashboard, Commissions, Products, Inventory, Branch Transfers (selected), Expenses, Reports, Profile, and Users. The main content area displays a table of batch records with columns: BATCH DATE, ROUTE, SENT, RETURNED, NET SOLD, REVENUE, and STATUS. Two batches are listed for Oct 03, 2026, both from Matina Commissary to Jacinto Branch. The first batch has 23 sent, 10 returned, 13 net sold, and a revenue of P1,950.00. The second batch has 34 sent, 12 returned, 22 net sold, and a revenue of P11,470.00. Both batches are marked as 'Reconciled'. A '+ New Batch Dispatch' button is visible in the top right corner of the table area.

BATCH DATE	ROUTE	SENT	RETURNED	NET SOLD	REVENUE	STATUS
Oct 03, 2026	Matina Commissary → Jacinto Branch	23	10	13	P1,950.00	Reconciled
Oct 03, 2026	Matina Commissary → Jacinto Branch	34	12	22	P11,470.00	Reconciled

The Branch Transfers list

Step 1 — Dispatching a batch

1. Click **+ New Batch Dispatch**.
2. Confirm the **From** (Matina Commissary), **To** (Jacinto Branch), and **Batch Date**.
3. Click **+ Add Product** for each item and enter the **Qty Sent** and **Unit Price**.
4. Click **Dispatch Batch**. The batch is now marked **Sent**.

Cancel

Dispatch Batch

The New Batch Dispatch form

BUILT-IN SAFEGUARD

Trove only lets you dispatch up to the **finished stock on hand** — it blocks over-dispatching, so your records can never show more sent than you actually had.

Step 2 — Reconciling returns

1. When unsold goods come back, click **View** → on that batch in the list.
2. Enter the **quantity returned** for each product.
3. Save. Trove computes **Net Sold** and revenue, and marks the batch **Reconciled**.

MODULE 7

Expenses

Expenses track the money going out — mostly buying raw materials. Because you have no fixed supplier, every purchase is recorded freely here, wherever you bought it. The form sits at the top of the page and your **Expense History** builds up below it.

The Expenses page

Recording an expense

1. In **Record New Expense**, set the **Date**, pick a **Category** (e.g. Ingredients, Packaging), and write a short **Description**.
2. Enter the **Amount** in pesos.
3. If the purchase restocks an inventory item, choose it under **Link Inventory** and enter the **Restock Qty** — Trove adds it back to your stock automatically.
4. Click **+ Record Expense**. It appears in the Expense History table.

TIP

Linking a purchase to an inventory item does two jobs at once: it records the **cost** and it **restocks** the item — no need to update Inventory separately.

MODULE 8

Reports

The Reports page gives you a **Weekly Batch Report** — a summary of how your branch-transfer batches performed over a date range. This is the printable record of your sales activity.

Generating a report

1. Set the **From** and **To** dates for the week (or any range) you want.
2. Click **Generate**.
3. Review the four totals: **Dispatched**, **Net Sold**, **Returned (loss)**, and **Units Sold**.
4. Click **Print / Save PDF** to keep a copy or hand it to your accountant.

The screenshot shows the Trove Reports page. The left sidebar contains navigation links: Dashboard, Commissions, Products, Inventory, Branch Transfers, Expenses, Reports (highlighted), Profile, and Users. The main content area is titled 'Reports' and 'Weekly batch report — sent, returned & net sold'. It features a date range selector with 'From' (10/05/2026) and 'To' (10/11/2026) fields, a 'Generate' button, and a 'Print / Save PDF' button. Below this is a 'Weekly Batch Report' section for the period 'Oct 05, 2026 — Oct 11, 2026' with '0 batch(es)'. A table displays the following data:

DISPATCHED	NET SOLD	RETURNED (LOSS)	UNITS SOLD
P0.00	P0.00	P0.00	0 pcs

Below the table, a message states: 'No batches in this date range. Try a different range, or create a batch in Branch Transfers.'

The Reports page — Weekly Batch Report

HOW IT FITS TOGETHER

The report covers your **sales side** (from Branch Transfers). Your **costs** are kept on the Expenses page. Put side by side — Net Sold against Expenses — they give you a plain read on whether the week made money. Income tax is left to your accountant; Trove focuses on the day-to-day numbers.

MODULE 9

User Management

This page is where you create and manage accounts for the people who use Trove. **Only the Owner and Managers** can open it, and public sign-up is turned off — new people can only log in with an account created here.

The User Management page

Creating an account

1. Click **+ Add User**.
2. Enter the person's **First Name**, **Last Name**, and **Email**.
3. Choose their **Role** (Manager or Staff), then set a **Password** and confirm it.
4. Click **Create Account**. They can now log in with that email and password.

Cancel Create Account

The Add User form

Deactivating instead of deleting

When someone no longer needs access, click **Deactivate** rather than deleting them. A deactivated person cannot log in, but every record they created stays in the system. The **Owner is the master account** and cannot be deactivated.

WHY NOT DELETE?

Deleting a person would break the history tied to them. Deactivating keeps your records complete and trustworthy — which matters for audits.

MODULE 10

Archiving & Records

Over time, old records pile up — finished orders, discontinued products, materials you no longer buy. Instead of deleting them (and losing the history), Trove lets you **archive** them: they're set aside but kept safe.

Archiving and restoring

1. On the **Products**, **Inventory**, or **Commissions** page, open a record's menu and choose **Archive**. It disappears from the normal **Active** view.
2. To see archived records, switch the toggle from **Active** to **Archived**.
3. To bring one back, open its menu in the Archived view and choose **Restore**.

The Active / Archived toggle (Inventory)

Permanent delete (Owner only)

If a record is truly no longer needed, the **Owner** — and only the Owner — can permanently delete it from the Archived view. This cannot be undone, so use it sparingly.

RULE OF THUMB

Archive is your everyday tool — safe and reversible. **Permanent delete** is a last resort, reserved for the Owner.

End of the Trove User Manual.
